Abstract

This document, which is based on an earlier document by Minton et al., (1999), describes the required formatting of JMLR papers, including margins, fonts, citation styles, and figure placement. It describes how authors can obtain and use a LATEX style file that will ease adherence to the requirements. It also contains a section on avoiding formatting errors that frequently appear in JMLR submissions. While the format requirements are only compulsory for final submissions, we encourage authors to adopt and adhere to its recommendations throughout the submission process.

Keywords: format, Microsoft word template

1 Introduction

Body Undented: after headings.

Body Indented:

1.1 Second Level Heading

| | CPU Speed | Wage |
|---|-----------|------|
| A | | |
| B | | |
| C | | |

Table 1. Note well that JMLR expects table captions below the table. >= 9pt font.
